

Following the family tradition, passion for creation and love for the crafts, we have produced leather goods for three generations.

We are inspired by beauty of people, their true lives and dreams, for whom and because of which, we create unique and sophisticated things.

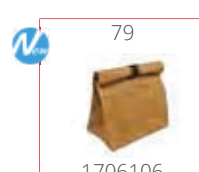

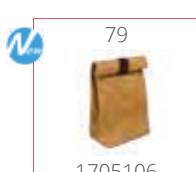

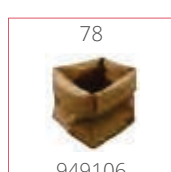

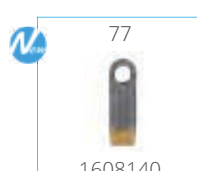

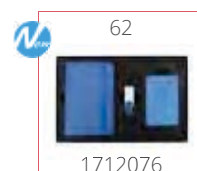

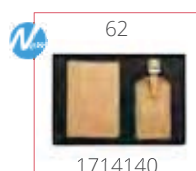

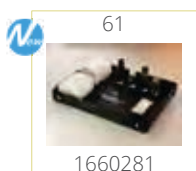

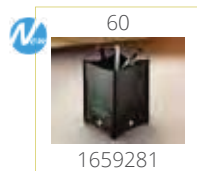

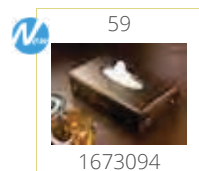

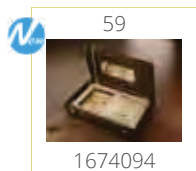

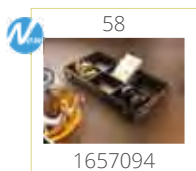

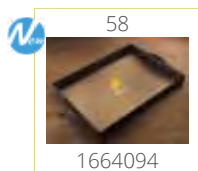

We strongly believe that the produced goods have soul, because each of them is made by hand, and their definite and unique shape reflects the artistry of our masters.

Sustainable development

Recycling

As a family business that has been operating on the market for three generations, we deeply respect the tradition of craftsmanship. We are aware of the processes and constant changes in our planet's ecosystem, that's why the production waste we produce is recycled. To additionally join the process of reusing materials, we offer collections of products made of recycled leather and fabrics.

Sustainable development

As a family business with a three-generation leather tradition, sustainability means responsible economic cooperation in the common market and avoiding activities that lead to excessive use of the environment. Our goal is to make every effort and consciously undertake such activities that the next generations who continue the company's development will have the same opportunities for development and life in a shared world.

REACH

We guarantee that the goods we offer meet the requirements of Directive 1907/2006/EC of the European Parliament and the Council. The structures of the European Union, by publishing a list of prohibited substances, impose an obligation on manufacturers and importers to avoid them. To ensure customers about the safety of the materials we use, we carry out tests, analyzing the chemical composition of products for these substances.

Packaging

„Disposable“ is today synonymous of easiness and cheapness. Disposable packaging and disposable products litter our planet. There is no doubt that most products require packaging. To reconcile the needs of the market with ecology, without causing excessive pollution on the environment, we use packaging made of cardboard, wood or recyclable plastics.

CE safety certificate

All our products, in accordance with the requirements of the European Union directives, have a CE safety certificate. By purchasing products offered in this catalog, you contribute to increase safety among your customers.

Registered designs (R)

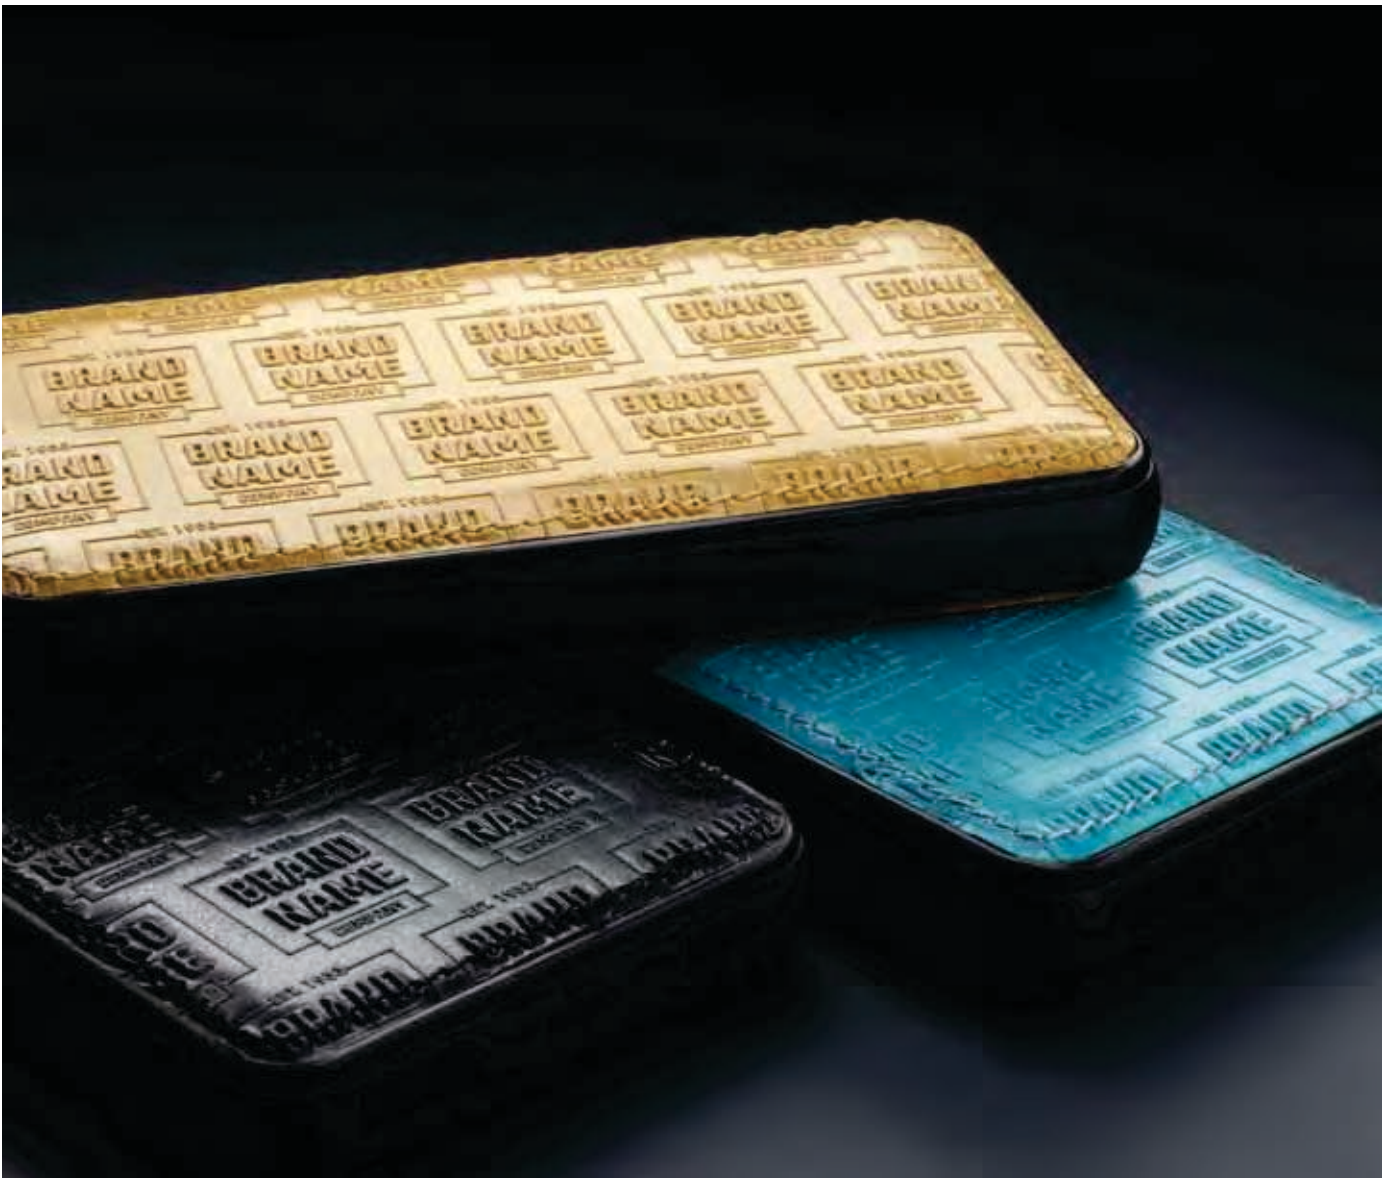

Design & Factory. The slogan contained in our logo best describes the mission we set ourselves many years ago by creating a research and development department in our company. By designing and producing products by ourselves, we have full control over their functionality and quality. By registering the developed models at the patent office, we focus on the development of innovation and creativity as a counterweight to mass production and copying solutions of other companies.

Modifications

Calendering (KL)

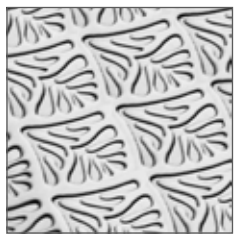

Calendering is formation of material to create a new structure or pattern.

Thanks to this method, you can create any motif on any material - leather, wood, exotic animals or an abstract pattern. It is an perfect tool for designing your own, sophisticated materials based on repetitive company logos or its characteristic elements. It is creating of innovative forms by following famous fashion designers. Products made of material designed in such a way will certainly be unique and will become a market distinguisher from the competition.

Modifications

Creative stitching (CS)

Automatic CNC machines allow sewing shapes based on one line. This method is different from computer embroidery, because it does not fill the whole picture, it only sketches its outlines, allowing the recipient to discover associations in their minimalism. The method of sewing allows you to go smoothly from the hem of the product to the pattern sewn on it, creating an inseparable wholeness. The variety of forms and possibilities depends only on your imagination. A nice addition to the sewing is embossed logo incorporated into design.

Modifications

Full colour leather print (DS)

Leather printing is an innovative, very durable method of personalizing products. It allows you to mark gifts not only with company colors, but also to create new material. We print on products made of Italia leather and Berlin PU leather. It can be used on the most small and medium-sized surfaces, up to 600 cm². The selected pattern is printed into white material, because this colour, after printing, faithfully shows the PANTONE colors. Printing must cover the entire element of the product, and each element is, according to the price list, a new operation - a new print. Customers can choose unprinted elements of leather or PU leather from the available colour range.

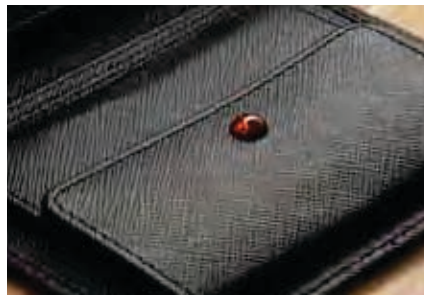

Modifications

Gemstone ornamentation (GS)

Gemstones as an elegant addition to any of our products.

It's time for you to shine! Pick your favourite gemstone from our offer and we will permanently decorate products of your choice. Due to their natural origin, each and every stone is different and unique, while the character of the decoration is timeless. The elegant gemstone ornamentation will make your gifts stand out in a subtle and refined manner.

Gemstone ornamentation starts with 25 pcs.

Amethyst

One of the most valuable and finest types of quartz. The admixture of iron results with its light-purple and dark-purple colours. Amethyst is transparent and translucent.

Agate stone

Quartz mineral, characterised by the striped structure. Agates commonly occur as light-gray stones. More vivid colours are seldom to be found in nature, therefore they often are being coloured with the usage of natural dyes.

Striped Flint

Decorative silica stone, sometimes with an admixture of chalcedony, opal or quartz. It was used in the manufacture of tools, weapons or in order to start a fire, even in the prehistoric times.

Obsidian stone

Natural volcanic glaze. Due to its sharp edges, obsidian had already been used in the Stone Age in manufacture of tools. Sometimes the cat-eye effect occurs on the surface of the stone.

Swarovski Crystal

A luxurious collection of rhinestones of the finest quality. They decorate jewelry pieces, clothes and other accessories. The crystals are being made of polished lead glass, the properties of which result with opalescent and shimmering optical effects.

Coral stone

Red-coloured bamboo coral stone, an environmentally friendly version. Natural coral is a sea polyp with a calcite skeleton, occurring in all the seas and oceans of appropriate temperature and cleanliness.

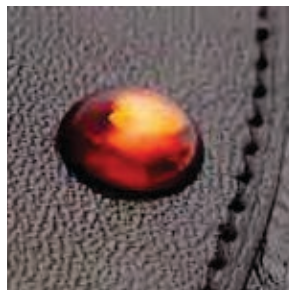

Opal stone

A natural photonic crystal, one of the most precious gemstones. It shows characteristic optical phenomena: iridescence, opalescence and the cat-eye effect.

Moonstone

A kind of an orthoclase, characterised by the silver-blue-pearl gleam, resembling the moonlight. Some of the moonstones feature the subtle, iridescent game of colours or flickers.

Amber

A fossil resin of conifers. Most commonly encountered as the yellow amber. Its transparency level depends on the amount of air bubbles and inclusions. The most valued type is the Baltic amber, once extremely valuable decorative material.

Beauty is timeless - the timeless beauty of leather can be found in its uniqueness.

The nature has seen to it that each element is exceptional. Natural leather is characterised by traces of minor stains, hornification of the face, yokes, which highlight the uncommonness and originality of the product.

These marks should be treated as a proof of authenticity and nobility of leather, from which the product was made.
